

Table 2. Bacterial isolates with the largest halo diameters when plated on Schwyn and Neiland medium (siderophore activity) or Pikovskaya medium (phosphate solubilization).

Selection medium for:	NCBI BLAST search analysis results
Siderophore activity	<i>Erwinia persicina/ rhapontici</i>
	<i>Enterobacteriaceae bacterium/ Erwinia sp.</i>
	<i>uncultured Erwinia sp./ Erwinia sp.</i>
	<i>uncultured Erwinia sp./ Erwinia sp.</i>
	<i>Erwinia rhapontici/sp.</i>
	<i>Erwinia rhapontici/sp.</i>
Phosphate solubilization	<i>Erwinia endophytica/ sp.</i>
	<i>uncultured Erwinia sp.</i>
	<i>uncultured Enterobacter sp.</i>
